Summary

QA Engineer with 4+ years developing test automation, plus 15+ years in IT. Sign-off releases, structure test plans and documentation, standardise release processes so critical defects never reach production.

Skills

Project Mgmt: Software Development Life Cycle (SDLC), Software Testing Life Cycle (STLC), Agile, Scrum

Test Automation: Playwright, Cypress, Selenium, Page Object Model (POM), RobotFramework, SikuliX

Languages & Databases: TypeScript, JavaScript, Python, SQL (MySQL, MS SQL, Oracle, SQLite)

API & Performance: REST/SOAP, Postman, SoapUI, k6, JMeter

Test Types: Functional, E2E, Integration, Regression, Smoke, Exploratory, Risk-based

CI/CD & Tooling: Git, Jenkins, AWS, Jira, Confluence, ALM, BrowserStack

Runtime & AI: Node.js, Bash, PowerShell, Autolt · Claude Code, GitHub Copilot

Work Experience

Quality Assurance Engineer, ICE Data Services Australia Pty Ltd

July 2022 – June 2026

- Introduced test automation on the essCert project by building a Playwright suite in TypeScript following POM principles from the ground up, running it across browsers and reducing manual testing effort by 50%.
- Re-engineered the entire automation suite when leadership switched from Playwright to Cypress mid-project, preserving full test coverage while the app was rebuilt on a modern React framework.
- Established a single source of truth for testing, with high-level scenarios in Confluence and detailed cases in ALM, cutting time spent searching for artifacts and keeping QA and stakeholders aligned on coverage.
- Extended test coverage beyond the UI by building API tests in Postman and SOAP UI and using SQL to validate data integrity end-to-end, catching backend and data discrepancies before they reached production.
- Acted as the final QA sign-off for production releases, gating each deployment behind a standardised pre-release checklist and smoke tests on Jenkins/Git, delivering zero critical incidents across 12 releases.
- Onboarded 2 QA engineers with a structured one-month guide, knowledge base articles in Confluence, and pairing sessions, halving ramp-up time from 2 months to 1.

Customer Support Consultant, ICE Data Services Australia Pty Ltd

June 2015 – July 2022

- Designed, documented, and executed test plans and logged product defects in Jira, then led testing and troubleshooting for the SIMS project — laying the QA groundwork that led transition to the QA Engineer role.
- Served as first point of contact for all customer support under strict SLAs, and reduced inbound support volume by authoring customer-facing "How-To" guides in Zendesk that let staff diagnose issues faster.
- Migrated enterprise client systems onto the company's hosted Citrix platform and led eCertify/TridentGLOBAL version upgrades, generating recurring annual revenue while minimising client downtime.

Systems Analyst, GFT Global Markets Asia Pte Ltd – Singapore

May 2012 – Oct 2014

- Automated routine restarts, checkpoint validation and Nagios host/service onboarding for the DealBook trading platform by writing custom Bash scripts cutting manual configuration effort by 50% and reducing human error.
- Delivered L1–L2 incident and service-request support across 8 global offices (US, London, APAC), handling 20+ mission-critical trading inquiries daily and meeting tight SLAs from interruption through to restoration.
- Became the Singapore team's SSL-certificate SME, centralising GFT/GAIN certificate monitoring into Nagios and fixing reporting/verification issues; documented the process in Confluence for team self-service

Network Engineer, Fujitsu Ten Solutions Philippines Inc

July 2006 – Mar 2012

- Built test environments and ran pre/post-deployment testing across multiple OS setups, isolating incompatibilities before roll out and validating backups via restorations to safeguard near-100% availability.
- Spearheaded open-source monitoring (Nagios, Cacti, AWStats, Mailgraph, Lightsquid) and scripted backups, antivirus updates, and alerting, replacing manual checks with proactive, self-reporting infrastructure.
- Reduced internal technical inquiries by 40% by authoring do-it-yourself troubleshooting guides for common issues and running targeted training sessions, curating the material in a shared knowledge base for staff and IT.

Certification

- Microsoft Certified Professional
- Linux Professional Institute Certification (LPIC-1)

Education

Bachelor of Science in Computer Engineering

May 2006
