Summary

I'm a Quality Assurance Engineer with 4+ years in QA and 15+ years in IT. I build test automation from the ground up, structure test documentation, and standardise release processes so defects never reach production.

Work Experience

Quality Assurance Engineer, ICE Data Services Australia Pty Ltd – Australia July 2022 – June 2026

- Introduced test automation on the essCert project by building a Playwright suite in TypeScript following POM principles from the ground up, running it across browsers and reducing manual testing effort by 50%.
- Re-engineered the entire automation suite when leadership switched from Playwright to Cypress mid-project, preserving full test coverage while the app was rebuilt on a modern framework.
- Standardised the release process with a pre-release checklist and per-build smoke testing wired into a Jenkins pipeline with code managed in Git, achieving zero critical production incidents across 12 consecutive releases.
- Slashed invalid "not reproducible" bug closures by 80% with a consistent bug report template and was adopted as the team-wide standard in Jira.
- Onboarded 2 QA engineers with a structured one-month guide, knowledge base articles in Confluence, and pairing Teams sessions, halving ramp-up time from 2 months to 1.
- Established a single source of truth for testing, with high-level scenarios in Confluence for stakeholders and detailed test cases in ALM, cutting time spent searching for test artifacts and keeping QA and stakeholders aligned on coverage.
- Built API test coverage with Postman and SOAP UI, using SQL to validate data integrity end-to-end.
- Accelerated test authoring and maintenance with Claude AI, and automated environment setup and routine checks with Bash and AWS cli scripts on AWS-hosted test environments.

Customer Support Consultant, ICE Data Services Australia Pty Ltd – Australia June 2015 – July 2022

- Served as first point of contact for Level 1 and 2 support, resolving troubleshooting and repair issues, meeting all SLA commitments, and sustaining high customer satisfaction.
- Built and curated an internal knowledge base in Confluence that helped staff resolve recurring issues faster, documenting all cases accurately in the tracking system.
- Produced reliable time and cost estimates for annual budgeting and project planning, and briefed management weekly through case and escalation reports, giving leadership the visibility to plan resourcing and act on recurring issues early.

Systems Analyst, GFT Global Markets Asia Pte Ltd – Singapore May 2012 – Oct 2014

- Delivered Level 1 and 2 technical support across a global environment of 8 offices in the US, UK, and APAC via Salesforce, achieving SLA targets for service restoration.
- Directed the full incident lifecycle for the Technical Support Center, assessing priority, coordinating escalations, and keeping stakeholders informed, minimising downtime and restoring full service within SLA.
- Maintained knowledge base articles and standard operating procedures, documenting recurring issues and resolutions to speed up troubleshooting and onboarding across support teams.

Network Engineer, Fujitsu Ten Solutions Philippines Inc – Philippines July 2006 – Mar 2012

- Owned end-to-end deployment of new workstations, engineering the Standard Operating Environment, imaging machines, provisioning access, and validating functionality before client handoff, delivering production-ready machines and reducing post-handoff issues.
- Handled network configuration and routing, setting up switches, VLANs, and IP addressing to keep connectivity reliable across the network.
- Administered operating systems, software, and system utilities to company standards through routine patching, configuration management, and hardware upgrades, keeping systems secure, stable, and compliant.

Skills

Languages: TypeScript, JavaScript, Python, SQL

Frameworks: Playwright, Cypress, Selenium, RobotFramework, K6, Jmeter, BrowserStack

Technologies: Claude AI, GitHub CoPilot, AWS, Git, Jenkins, Jira, Confluence, ALM, Postman, SOAP UI, AutoIT, Citrix, PowerShell, Bash

Education

Bachelor of Science in Computer Engineering

May 2006
